

# Digital Tachograph Remote Downloading

## The smarter way to remain compliant.

Novadata Smartdownload is the new way of collecting Driver Card and Vehicle Unit data from digital tachographs for analysis and reporting. It enables operators to download driver card files and vehicle unit data automatically to a schedule that suits you, safeguarding compliance, cutting costs and minimising time spent managing the whole process.

Novadata Smartdownload takes away the headaches associated with managing and controlling the time-consuming process for downloading digital tachograph data. This is a problem for fleets of all sizes but especially when drivers, vehicles and depots are located across the

UK or even Europe.

“

We decided to use automatic remote download of digital tachograph data to safeguard our compliance and reduce the man hours spent managing the process and downloading data from the vehicle. Using remote download is saving us around ten man-hours per week. The tachograph data is downloaded in the background

”

for analysis and reporting using Smartanalysis.

*John Burbridge; Group Quality and Compliance Manager Turners (Soham) Ltd*

### Efficient Downloading

Smartdownload eliminates the need for depot based download devices which are often cumbersome to use. Using Smartdownload you can be safely assured your vehicle will be downloaded wherever it is.

Existing operators are saving on average over 26 man-hours per year per vehicle using Smartdownload whilst eliminating the associated costs.

### Increase Compliance

Never miss a driver card or vehicle download again! With Smartdownload you are able to schedule your vehicle downloads in order to comply with the legal limits.

Driver cards are downloaded when they are inserted into the tachograph allowing regular monitoring of your driver activities.

### Straight to your software

Remote downloading takes away the time-consuming and technical process of transferring data from handheld download tools to your computer.

The files can go straight from your vehicle to all popular and well established tachograph analysis solution such as Novadata Smartanalysis and TachoTEK.

### Installation

The device simply plugs into the rear of the digital tachograph giving a hidden and neat installation within the cab.

Although fitting is straightforward, Novadata recommends that the remote downloading device is fitted by a professional auto-electrician or tachograph centre.
